

FACT SHEET

nPower® Data Migration

An Overview of HaystackID's Enterprise Managed Solutions nPower Program

HAYSTACK™

nPower[®] Corporate Compliance Solutions

Using the latest technology, HaystackID's experts empower organizations to categorize, remediate, migrate, and protect their sensitive data. Knowing where all sensitive data resides and how the data is stored and classified is an important compliance requirement. If you don't know the type of PII and sensitive IP data you have and how it's shared, processed, and stored, it is difficult to know if you are complying with privacy regulations and protecting your sensitive IP.

Benefits:

- Ability to demonstrate due diligence and evidence of compliance.
- Improvement of institutional transparency and individual awareness that data management best practices are being followed.
- Improvement of operational efficiencies to minimize the excessive and unnecessary collection, use, retention, and disclosure of personal information and sensitive IP, and perhaps identify simpler and less costly solutions at the start.
- Better protect sensitive corporate IP from unauthorized use or disclosure.

nPower® Data Migration

HaystackID provides a comprehensive evaluation of the current data environment and migration goals to create a detailed migration plan, data clean-up, and custom workflow.

Benefits:

- Create a defensible data migration and disposition plan.
- Identify legacy data (i.e., stored data with no business value).
- Migrate legacy data to secure cloud storage.
- Deduplicate, index, and categorize unstructured data.
- Provide secure access to the legacy data for search and analysis.
- Identify document with business, compliance, or discovery value.
- Dispose of documents with no continuing business value or legal obligation to preserve.

Conclusion

The mapping and classification of data is critical to understanding the data landscape of your enterprise. By understanding where sensitive data is located across an enterprise, HaystackID can mitigate your data risk footprint. HaystackID's data mapping and classification delivers this insight with a consistent process that identifies and tags all sensitive information in structured and unstructured forms across your enterprise. Together, data mapping, classification, migration, and remediation will make data more secure by providing the critical first step in a comprehensive data privacy and security program.
