An Overview of HaystackID's Enterprise Managed Solutions nAlytics Program

HAYSTACK

# nAlytics® Advanced Analytics Suite

Legal groups face pressure to contain costs, avoid judicial scrutiny, minimize risks, and provide state-of-the-art electronic discovery. To help meet these challenges, organizations are seeking discovery partners with solutions that are intelligent, repeatable, defensible, and cost effective.

Advanced analytics have been widely publicized as the antidote to the spiraling volume of data and high costs associated with discovery. However, few truly understand the technologies used and the meaning of the results they produce. Organizations need a trusted partner to qualify, evaluate and validate these technologies to achieve maximum efficiency and defensibility.

HaystackID's nAlytics is an advanced analytics suite designed to help plan, deploy, and validate the application of advanced analytics and statistical sampling to the discovery process.

# nAlytics® Key Program Components

**Technology Assisted Review (TAR) Qualification**

Is your case right for the use of TAR? If so, what is the best workflow to use? The nAlytics qualification protocol is a stepwise approach that provides an objective analysis of the advantages and disadvantages of the application of TAR to your particular matter.

**TAR Verification**

Did the TAR application and workflow achieve the desired results? nAlytics provides a verification system that goes beyond the reported results of the software and uses independent statistical sampling to verify that the results match the report.

**Search Term Verification**

Legal teams often create search term lists haphazardly; relying on intuition, familiarity with the matter, and legal experience. This is not a sound basis for effective search term filtering. Sampling documents with and without search term hits can be used to validate and measure the efficacy of search terms and can increase the defensibility of a search term filtering approach. Applied correctly, sampling can also provide invaluable evidence in determining the scope of discovery and retention.

**Manual Review Statistics**

Manual review of documents cannot be completely replaced with machine techniques. A rigorous, real-time analysis of manual review activity, using advanced analytical techniques, can uncover problems and biases in the review process. By combining the power of machine learning with the intelligence of attorney reviewers, you can obtain the best possible outcome.

# nAlytics® Program Highlights

## Your nAlytics Team

Every nAlytics client is assigned a dedicated team of experienced consulting technicians and project managers, including at least one senior portfolio manager (JD and CEDS) and senior consultant technician. Portfolio managers are part of the HaystackID staff. Scientific consultants and analysts are provided by internationally recognized consulting practices and universities specializing in deep computer analytics, financial modeling and statistical sampling methodologies.

## Technology and Security

HaystackID's secure hosting infrastructure is ISO 27001/SSAE 16 compliant and built for scale, performance and security. Our data centers, systems and facilities have passed security inspections for some of the largest companies in the U.S. Our largest cases exceed sixty million records and serve over 300 concurrent users.

## Rates and Billing

nAlytics programs are built to be the right size in proportion to the cases and specific needs of our clients. Each engagement is accompanied by a statement of work that clearly outlines the scope of the program components. Clients are billed hourly for services. The rate of each participating team member is clearly outlined in the statement of work. Flat fee arrangements are considered on a case-by-case basis after an analysis of the matter and work to be performed.
